TECHNICAL SKILLS

LANGUAGES

- Python, SQL, JavaScript
- TypeScript, PHP, HTML/CSS

FRAMEWORKS & TOOLS

- Vue.js, Nuxt.js, Pinia
- MySQL, Chart.js, Git & GitHub
- Chrome Extension APIs

SYSTEMS & SECURITY

- Windows OS, Microsoft 365
- Active Directory (growing)
- Basic Networking
- Web Security (OWASP, HTTP headers)

CORE COMPETENCIES

ANALYSIS & REPORTING

- Root Cause Analysis
- System & Incident Log Analysis
- Recurring-Issue Trend Identification
- Technical & Requirements Docs

SYSTEMS & DATA

- IT Asset Tracking & Inventory
- Ticketing-Based Incident Mgmt (ITSM)
- OS Updates & Patch Management
- Data Backup & Recovery

DEVELOPMENT

- Web Application Development
- Testing & Debugging

WORKING STYLE

- Analytical & Detail-Oriented
- Cross-Functional Communication
- Customer Service Orientation
- Multi-Tasking Under Pressure
- Fast Learner

LANGUAGES

- English (Professional)
- Burmese (Native)

MIN MYAT HAN

IT ANALYST | SYSTEMS & IT SUPPORT ANALYST

PROFESSIONAL SUMMARY

Computer Science graduate with a practical foundation across IT support, systems analysis and web development. Builds working tools end to end, from a browser extension that audits websites for client-side security issues to a role-based marketplace backed by MySQL and an IT asset management dashboard. Comfortable troubleshooting hardware, software and access issues, analyzing system and incident data with Python and SQL, and turning technical findings into clear documentation for technical and non-technical stakeholders. Growing skills in Active Directory, Microsoft 365, networking and web security. Based in Thailand and open to relocation, including discussing visa or work-permit timelines with the employer.

PROJECTS

VulnEye — Client-Side Web Security Scanner *(JavaScript, Chrome Extension APIs, HTML/CSS)*
github.com/HanZing/vuln

- Built a Chrome extension that scans any webpage across six security checks: vulnerable JavaScript libraries, XSS-prone patterns, HTTP security headers, CSRF protection, Content Security Policy and third-party trackers.
- Matched loaded scripts against known-vulnerable library versions (retire.js data) and identified trackers from a 44,000-domain list, with OWASP-referenced severity ratings and suggested fixes.
- Combined results into a weighted 0–100 security score with exportable PDF reports, scan history, a domain whitelist and per-scanner settings.

AssetOps — IT Asset Management Dashboard *(Vue.js, Nuxt.js, TypeScript, Pinia, Chart.js)*
github.com/HanZing/asset-ops

- Built a dashboard for tracking laptops, servers, monitors and software licenses, with summary metrics for assigned, available and retired assets and overall utilization.
- Implemented add, edit and delete, search, filtering by type and status, and per-asset detail pages using a typed Pinia store, reusable components and a filtering composable.
- Visualized inventory by type and status with Chart.js charts that update as asset data changes.

CarSim — Used Car Marketplace *(PHP, MySQL, JavaScript, Python)*
github.com/HanZing/CarSim · University software engineering project

- Developed a role-based web application for admins, buyers, sellers and agents using a Boundary–Control–Entity architecture.
- Implemented registration and login with hashed passwords, admin tools to create, search and suspend user accounts and profiles, car listings, buyer shortlists, agent ratings and reviews, and a loan calculator.
- Accessed MySQL through parameterized PDO queries and wrote Python scripts to generate test data and automate login tests for each user role.

EDUCATION

Bachelor of Science in Computer Science — Graduated: 2026
University of Wollongong, Australia

ADDITIONAL INFORMATION

- Open to relocation for the right opportunity, including discussing visa/work-permit timelines with the employer.
- Building depth in Active Directory, Group Policy, mobile device management (iOS/Android), and macOS support; comfortable supporting both standard and VIP-level users.
